**P631: Accelerating opposition analysis in professional rugby**

**Past fortnight**

Over the past fortnight, the team has focused on completing the initial project setup and preparing for our first meeting with the Industry Partner.

team members completed the required SCIP agreement and submitted their individual availability through WhenIsGood. We also coordinated our availability and prepared and sent our first email to the Industry Partner, introducing team T243 and confirming our interest in working on P631.

The team held meetings and discussions to review the outcomes from our Week 5 Tutor meeting, clarify our next steps, and prepare for stakeholder engagement. We also developed questions for the Industry Partner focusing on areas that are still unclear, including the current opposition-analysis workflow, existing data sources and analytical tools, manual or repetitive tasks, project expectations, technical requirements, access to existing systems or repositories, and meeting arrangements.

These activities have helped the team move from the initial project setup stage toward direct engagement with the Industry Partner while avoiding assumptions about the final technical solution before we understand the current process.

**Fortnight ahead**

Our main priority for the next fortnight is to attend our first Industry Partner meeting and develop a clearer understanding of the current opposition-analysis process and the Partner's expectations.

During the meeting, we plan to gather information about the existing workflow, stakeholders, data sources, analytical scripts or notebooks, reporting requirements, pain points, technical environment, and any existing work that may be relevant to the project.

After the meeting, the team will review and consolidate the information we receive, identify any unclear or missing information, and agree on follow-up actions. We also plan to begin identifying the main requirements, project risks, possible automation opportunities, and areas that may need further investigation before defining the Phase 1 scope.

The team will continue meeting regularly to coordinate responsibilities and prepare for the next stage of project planning.

**To discuss**

- We would like to review the questions we have prepared for our first Industry Partner meeting and confirm whether there are any important areas we should prioritise.
- We would like advice on what level of detail we should aim to understand the current workflow and stakeholder needs at this stage of the project.
- Since our Industry Partner meeting will take place after this Tutor meeting, we would like to confirm what information would be most useful to capture in our meeting minutes

and what discussion points we should send to Sarah afterwards for additional feedback.

- After the Industry Partner meeting, what should our main priorities be before the next Tutor meeting, particularly regarding requirements, workflow understanding, risks, and early Phase 1 planning?

**a. Kelvin Dang (n12051632)**

**My work**

Over the past fortnight, I continued learning more about P631 and preparing for our first meeting with the Industry Partner. I joined our team meetings and discussions where we talked about what we still need to know about the project and prepared questions for the Partner. I mainly focused on understanding how the current opposition-analysis process may work, such as where the data comes from, how scripts or notebooks are used, which parts may still be done manually, and how the final results are given to analysts and coaches.

From these discussions, I realised that there are still many things we need to confirm with the Partner. For example, we still do not know exactly what tools and data they currently use, which steps take the most time, and which parts they would like us to improve or automate. I also helped think about questions for the Partner meeting, especially questions about their current process, existing tools, and the main problems they face.

For now, I think it is better for us to understand the real process first instead of choosing a technical solution too early. My main focus during this fortnight was therefore to understand the project better and help the team prepare for the Partner meeting.

**My plans**

Over the next fortnight, I want to get a clearer understanding of how the current opposition-analysis process works in practice. During the meeting with the Industry Partner, I plan to ask and listen carefully about their data sources, current scripts or notebooks, manual steps, main problems, and the type of results they need for analysts and coaches. I also want to find out which parts of the process are the most repetitive or time-consuming.

After the meeting, I will help the team review what we learned and identify the main requirements, problems, and possible areas that we could improve or automate.

Once we understand the workflow better, I also want to start looking at possible ways to connect or automate different parts of the process. However, I do not want to decide on a specific technology until we have enough information from the Partner.

I will continue joining team meetings and discussions and helping with the next project tasks. By the next Tutor meeting, I hope to have a much clearer understanding of the Partner's current workflow, their main needs, and what our team should focus on next.

**b. Leon Duong (n11849789)**

**My work**

Over the past fortnight, I continued researching rugby, including its rules, terminology and opposition analysis, to improve my understanding of the project. Unfortunately, our team was unable to meet with the partner as planned, so there was limited project-specific work we could complete. Instead, I focused on preparing questions for the partner about their current analysis process, challenges and expectations. I also actively participated in team discussions and planning in my group to share and express my ideas to them.

**My plans**

Over the next fortnight, after our group met with the partner and gained a clearer understanding of their current opposition analysis workflow and requirements. I will use the information from the meeting to identify potential areas for improvement and help the team decide on our next steps. I will also continue researching rugby and contribute to team discussions and assigned tasks.

**c. Nao Hakoda (n11917580)**

**My work**

After the meeting with tutor week 5, my teammate recorded the meeting, so I reviewed it and summarized what we need to do before the first meeting with our partner.

I had two meetings. The first meeting was on Thursday in week 6. We prepared for the first meeting with our industry partner, thinking about questions that we want to ask for our partner. These include technical questions.
In the second meeting, discussed Assessment 1.2, what we did in the past fortnight, and what we will do next fortnight. Since we haven't finished our first meeting with our partner, we still think about what we will discuss during the meeting with a tutor.

**My plans**

I cannot attend the first meeting with our tutor because of the in class exam, so I'll ask my team about the meeting content, important information especially about technical things, and start planning the project. If my teammate records the meeting, I'll also review it. If new questions come up, I'll make sure to ask our partner during the next meeting. I will have usual meetings with my team on Tuesday and arrange additional meetings if needed continuously.
over the next fortnight, I'll keep contributing to my team and keep in touch with my team to make sure everything is going as planned.

**d. Ngoc Ha Nguyen (n12248746)**

**My work**

Over the past fortnight, I continued contributing to the team's coordination and preparation for stakeholder engagement on P631: Accelerating Opposition Analysis in Professional Rugby.

I attended our weekly team meetings on Tuesdays and participated in additional team discussions during our Thursday tutorials. These meetings allowed us to share updates, coordinate responsibilities, and maintain a common understanding of the project's progress. I also took notes during the tutorial discussions to record important information, decisions, and next steps. These tutorial meeting notes NOTE helped ensure that key information remained accessible to the team after each discussion.

As a team, we collaboratively prepared and reviewed an email to the Industry Partner. I contributed to reviewing the draft to ensure that the message was clear, professional and represented the team appropriately. Through this communication, we confirmed our first meeting with the Industry Partner for Friday, 4 September. This was an important step because it enabled us to move from initial project preparation towards directly understanding the Partner's current workflow and expectations.

As part of the team's preparation, I prepared my own questions for the Partner meeting. My questions focused on the current workflow, the data sources and analytical components being used, the reports provided to coaches. This followed the plan identified in my previous fortnightly summary and will help the team gather reliable information before defining the project scope or selecting a technical solution. Overall, my contributions during this fortnight supported team communication, documentation and preparation for the first Industry Partner meeting.

**My plans**

During the meeting on Friday, 4 September, I will actively participate in the discussion and help record information about the existing workflow, stakeholder needs, data sources, analytical scripts and reporting expectations. I will pay particular attention to the information that coaches and analysts need and the difficulties they experience in the current process.

After the meeting, I will review and organise my notes and share the key findings with the team. I will help identify the Partner's main priorities, requirements, decisions so that all members maintain a consistent understanding of the project.

**e. Star Kamonthitiwuth (n11864133)**

**My work**

Over the past fortnight, I have mainly contributed to the team's coordination, documentation, and preparation for our first meeting with the Industry Partner.

After our Week 5 Tutor meeting, I recorded the discussion, converted the recording into a written transcript, and shared it with the team so that everyone could review the advice and instructions provided by our Tutor. I also summarised the key outcomes from the meeting and organised them into a clear list of the next steps for the team. This included completing the SCIP agreement through DocuSign, submitting individual availability through WhenIsGood, preparing our first email to the Industry Partner, and planning how we would prepare for the first Industry Partner meeting.

I also asked team members to share updates in the group chat once they had completed the required steps and collected the team's availability information so that we could accurately communicate our availability when contacting the Industry Partner. This helped the team keep track of what had been completed and what still needed attention.

In addition, I organised a team meeting to prepare our first email to the Industry Partner. During this process, I helped structure the communication steps we may need to follow, including the initial introduction email and possible follow-up communication after the first Industry Partner meeting. I also worked with several team members to prepare questions for the first meeting so that we could better understand the Partner's expectations, current workflow, existing systems or tools, meeting arrangements and any work that may already exist from previous Capstone projects.

These activities helped the team move from the initial project setup stage towards direct engagement with the Industry Partner in a more organised and prepared way.

**My plans**

Over the next fortnight, my main priority is to support the team in capturing and organising the information we receive from our first Industry Partner meeting.

If permission is given by the Industry Partner, I plan to record the meeting and convert the recording into a written transcript so that the Team can review the discussion accurately afterwards. I will also prepare a summary of the key information from the meeting, including important requirements, expectations, decisions, unanswered questions and agreed next steps.

If any information from the meeting is unclear or incomplete, I plan to help prepare a follow-up email to the Industry Partner to clarify those points rather than making assumptions about the project.

Following the Industry Partner meeting, I also plan to bring the main outcomes to our next Tutor meeting so that we can discuss how the meeting went, whether our understanding of the project is developing in the right direction, and whether there is anything we should clarify or prepare before the second Industry Partner meeting.

Based on the feedback and information we receive from both the Industry Partner and our Tutor, I plan to organise the team's next steps and help make sure that responsibilities, follow-up actions and upcoming priorities are clearly communicated within the group.
